Sokkun Kapas Eis: Mettóóch mi kochufengen (9 pwoin)

Ew mettóóch a tongeni ekesiwini pwan óch mettóóch:

A house near the ocean in Surfside, New Jersey, is built on stilts.

Sometimes, when buildings are built near areas that are likely to flood, they are built on stilts. This allows the house and its contents to remain safe if the area floods. An example is shown in Figure 1.

Figure 1. Stilt House

Your Task

In the questions that follow, you will make a claim about the effectiveness of stilts as a solution to flooding.

Chufengenin:

Part A

Select the boxes to identify whether stilts on a house protect against or do **not** protect against each of the actions.

	Protects Against	Does Not Protect Against
Household objects being washed away	<input type="checkbox"/>	<input type="checkbox"/>
Water damage to floors	<input type="checkbox"/>	<input type="checkbox"/>
Water damage to household objects	<input type="checkbox"/>	<input type="checkbox"/>
Yard flooding	<input type="checkbox"/>	<input type="checkbox"/>

Part B

Select **three** conditions that the stilts must meet to allow a building and its contents to remain safe if the area floods.

- cost a lot of money
- resist strong water current
- match the building’s appearance
- support the weight of the building
- be tall enough to keep the building out of water

Part C

Choose **three** problems that could be caused by using stilts under buildings.

- Buildings with stilts provide a better view.
- The stilts will get wet during a storm or flooding.
- Buildings would be damaged if stilts were to fail.
- Buildings are harder to enter because of stairs and ramps.
- Stilts can cause buildings to move side to side in high winds.

Part D

Are stilts a good solution to allow a building and its contents to remain safe if an area floods?

Click on each blank box to select the word or phrase that completes the sentences.

Stilts could be a [] solution to flooding because they
[]. This means that
[].

Apwungu:

Ewe chóón sukuun epwe angei 1 pwoin non kinikin A ren ekkei mi tettenitiw:

- Ei chóón sukuun a fini “Tumwunu seni” ren “Pisekisekin non imw a maaninó”, “Taan simen ren konik”, me “taan pisekisekin non imw ren konik”.
ME
- Ewe chóón sukuun a fini “Ese tumwunu seni” ren “Pwuunón konik non en yard (nukun en imw)”.

Part A

Select the boxes to identify whether stilts on a house protect against or do **not** protect against each of the actions.

	Protects Against	Does Not Protect Against
Household objects being washed away	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Water damage to floors	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Water damage to household objects	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Yard flooding	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Ewe chóón sukuun a angei 3 pwoin ren an fini ekkei unungat pénúwan mi tettenitiw non kinikin B:

- “fiu ngeni pechokunen euten konik”
- “anisi choun en imw”
- “epwe ttam an en imw esapw nomw non konik”

Part B

Select **three** conditions that the stilts must meet to allow a building and its contents to remain safe if the area floods.

- cost a lot of money
- resist strong water current
- match the building’s appearance
- support the weight of the building
- be tall enough to keep the building out of water

Ewe chóón sukuun epwe angei 3 pwoin ren an fini ekkewe pénúwan mi tettenitiw non kinikin C:

- “Imw epwe ta ika uran kewe repwe osukosuk.”
- “A weires tonong non imw ren ekkewe natté ika anetáán non.”
- “Uran imw a efisata an en imw epwe mwokut seni epek ngeni epek fan ngusun asepwán.”

Part C

Choose **three** problems that could be caused by using stilts under buildings.

- Buildings with stilts provide a better view.
- The stilts will get wet during a storm or flooding.
- Buildings would be damaged if stilts were to fail.
- Buildings are harder to enter because of stairs and ramps.
- Stilts can cause buildings to move side to side in high winds.

Ewe chóón sukuun a angei 2 non kinikin D ren an fini ekkei pénuwan non mettóóch sipwe tiki pwe sipwe kuna tetenitiwen:

- Ewe chóón sukuun epwe fini “éech” non ewe ewin mettóóch sipwe tiki pwe sipwe kuna tetenitiwenme “mwut ngeni konik epwe pwutiw faan ekkewe imw” non ewe oruuwan mettóóch sipwe tiki pwe sipwe kuna tetenitiwen, IKA ewe chóón sukuun epwe fini “ngaw” non ewe ewin mettóóch sipwe tiki pwe sipwe kuna tetenitiwen me “epwe ta ekkewe imw ika ese pwonueta” ika “mée watte” non ewe oruuwan mettóóch sipwe tiki pwe sipwe kuna tetenitiwen” (1 pwoin)
- Ewe chóón sukuun a fini ew pénuwan non ewe aunungatin mettóóch sipwe tiki pwe sipwe kuna tetenitiwen ewe a awenewen won ewe sentence a féér fengen me ekkewe ruu mettóóch sipwe tiki pwe sipwe kuna tetenitiwen. (1 pwoin)
 - Ren “mée watte”, ewe chóón sukuun a fini “ewe mwoni a kamééngeni ekkewe úr a tongeni pwan nounou ngeni ekkóoch mettóóch”
 - Ren “epwe atai ekkewe imw ika ese pwonueta”, ewe chóón sukuun a fini “ekkewe úúr a pwan féératá ekkóoch osukosuk”
 - Ren “mwut ngeni konik epwe pwutiw fan ekkewe imw”, ewe chóón sukuun a fini “úr a anapano tumwun ren an esapw pwunong konik non ekkwe imw”.

Awewen epwe unus pwoinen ekkewé pénuwan non kinikin D:

Part D

Are stilts a good solution to allow a building and its contents to remain safe if an area floods?

Click on each blank box to select the word or phrase that completes the sentences.

Stilts could be a good ▼ solution to flooding because they
allow water to pass underneath the buildings ▼. This means that
stilts improve safety by reducing the possibility of buildings flooding ▼.

Part D

Are stilts a good solution to allow a building and its contents to remain safe if an area floods?

Click on each blank box to select the word or phrase that completes the sentences.

Stilts could be a solution to flooding because they
 . This means that
.

Part D

Are stilts a good solution to allow a building and its contents to remain safe if an area floods?

Click on each blank box to select the word or phrase that completes the sentences.

Stilts could be a solution to flooding because they
 . This means that
.

A student is writing a report for English class about folk heroes. Read the draft of his introduction and conclusion and complete the task that follows.

You may never have heard of John Chapman, but you probably have heard of Johnny Appleseed. He was an American folk hero and pioneer who was born in Massachusetts in 1774. When he was eighteen years old, he decided to help the pioneers who were moving west. He had a dream of growing apple trees and giving apple seeds to them. That way, they would never go hungry.

Many people said that Johnny was a cheerful and generous man who loved the wilderness and was gentle with animals. What he is most known for today, though, is walking the countryside and planting apples. He did this for almost fifty years. To this day, many festivals are held every year to honor him. Next time you bite into a crispy, juicy apple, thank Johnny Appleseed.

The student took these notes from credible sources:

- Planted seeds along roadways, forests, and near rivers
- Traveled from Massachusetts to Pennsylvania
- Spent 50 years walking the countryside
- Stayed ahead of settlers
- Planted apple seeds along roadways and in forests as he moved west
- Planted seeds anywhere pioneers would settle
- Got seeds for free from cider mills and kept them in leather bags
- First nickname was the "apple seed man"
- Later called "Johnny Appleseed"
- Made friends with Indian tribes
- Learned some Indian languages
- Lots of festivals named after him
- Children loved him and listened to his stories
- Was generous and kind
- When invited for a meal, would not eat until the whole family had had enough food
- Was kind to animals
- Bought a horse that was going to be put to sleep and gave the horse to someone needy to keep his promise to treat the horse kindly
- Wore apple sacks for clothing and gave nice clothes to settlers

Write one or two body paragraphs using appropriate details from the student's notes to explain the "man behind the legend" without repeating the ideas presented in the first and last paragraphs.

Write one or two body paragraphs using appropriate details from the student's notes to explain the "man behind the legend" without repeating the ideas presented in the first and last paragraphs.

John Chapman traveled from Massachusetts to Pennsylvania, keeping ahead of the settlements. Every year, he planted apple seeds farther west. He carried a leather bag filled with apple seeds that he collected from cider mills. He would take the seeds from the bag and plant them along roadways, in forests, and in other places where pioneers settled. He was soon known as the "apple seed man" and later as "Johnny Appleseed." Sometimes on his travels, he would be invited to have a meal with a pioneer family. He would not start eating, though, until he knew the whole family would have enough food. The children loved his stories, and their

Sparks fly off the wheels of a train when the brakes are applied.

Click the small gray arrow to see a demonstration of this happening in Animation 1.

Animation 1. Braking Train

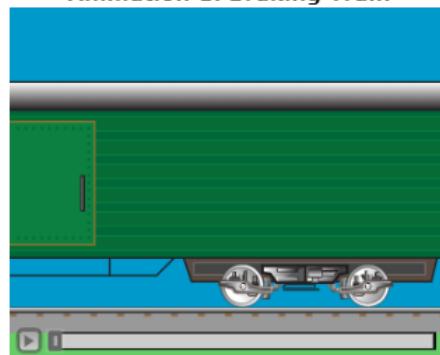

Table 1 explains some properties of the train and its surroundings as energy flows throughout the system.

Table 1. Properties of the Train System

Before Brakes Are Applied	After Brakes Applied
No sparks	Sparks fly off the wheels and brake pads
Brake pads make no sound	Brake pads make sound
Brake pads are cold	Brake pads are hot
Wheels are warm	Wheels are hot
Rails are warm	Rails are warmer
Train is moving fast	Train is moving slow

Your Task

In the questions that follow, you will analyze what happens to the train when the brakes are applied.

Chufengenin:

Part A

Click on each blank box to select the word or phrase that completes each sentence, constructing an argument about what happens when the train's brakes are applied.

Applying the brakes causes the [] to transfer kinetic energy to the []. This causes the [] to slow down and have [] kinetic energy, which slows the train.

Part B

When the train applies its brakes, what happens to the energy of the surroundings?

- (A) The surroundings gain energy.
- (B) The surroundings lose energy.
- (C) The surroundings do not gain or lose energy.
- (D) There is not enough information to determine the energy of the surroundings.

Part C

Which **three** statements support your choice in part B?

- The train maintains its speed.
- Sound is produced.
- Sound is consumed.
- Light is produced.
- Light is consumed.
- Heat is produced.
- Heat is consumed.

Part D

Select **three** pieces of evidence that would support the claim that the kinetic energy of the wheels changed form.

- The brakes give off energy as heat.
- The brakes make a screeching sound.
- The brakes undergo a chemical reaction.
- The sparks that fly off the wheels give off light.
- The potential energy of the train increases as it slows.

Apwungu:

Ewe chóón sukuun a angei 2 pwoin non kinikin A ren ekkei a tettenitiw:

- Ewe chóón sukuun a fini “wil” non ewe ewin blank (nain ese amasow) me “preikin” ika “rail (mechan nenien anen waa ren train) ” non ewe oruuwan blank. (1 pwoin)
- Ewe chóón sukuun a fini “wil” non ewe aunungatin nain ese amasow me “kukun seni” non ewe aruwanun nain ese amasow. (1 pwoin)

Part A

Click on each blank box to select the word or phrase that completes each sentence, constructing an argument about what happens when the train’s brakes are applied.

Applying the brakes causes the **wheels ▾** to transfer kinetic energy to the **brakes ▾**. This causes the **wheels ▾** to slow down and have **less ▾** kinetic energy, which slows the train.

Ewe chóón sukuun a angei 1 pwoin non kinikin B ren an fini “Ewe neni a wor energy (apechokun)”

Part B

When the train applies its brakes, what happens to the energy of the surroundings?

- A The surroundings gain energy.
- B The surroundings lose energy.
- C The surroundings do not gain or lose energy.
- D There is not enough information to determine the energy of the surroundings.

Ewe chóón sukuun a angei 3 pwoin non kinikin C ren an fini ekkei mi tettenitiw:

- “A wor tikkin sia rong (sound).”
- “A wor saram.”
- “A wor pwichikkar.”

Part C

Which **three** statements support your choice in part B?

- A The train maintains its speed.
- B Sound is produced.
- C Sound is consumed.
- D Light is produced.
- E Light is consumed.
- F Heat is produced.
- G Heat is consumed.

Ewe chóón sukuun a angei 3 pwoin non kinikin D ren an fini ekkei a tettenitiw:

- “Ewe preiki a okusau energy non napanapan pwichikar.”
- “Ekkewe preiki epwe kiik sia rong.”
- “Ekkewe mwalian sipaak a saa seni en wil a awora saram.”

Part D

Select **three** pieces of evidence that would support the claim that the kinetic energy of the wheels changed form.

- The brakes give off energy as heat.
- The brakes make a screeching sound.
- The brakes undergo a chemical reaction.
- The sparks that fly off the wheels give off light.
- The potential energy of the train increases as it slows.
